

DAY 01

Your Brain is the Product.

AI is the factory.

KASICODE

by Prestige Platform

5-Day Cohort · Day 1 of 5

3 Hours · Build Your First App Today

Goal: Break the barrier. Ship something real.

Works on your phone. No laptop needed.

kasicode.app

What we're doing today

0:00 – 0:30

Mindset

The shift that makes everything possible

← WE ARE HERE

0:30 – 2:00

Build It

Your first working app — live, in this room

2:00 – 2:20

Make It Yours

Customise, personalise, own it

2:20 – 2:50

Demo Day

Everyone shows what they built

2:50 – 3:00

What's Next

Day 2 preview + tonight's challenge

This is NOT a coding course.

It is a business problem-solving course. AI writes the code. You bring the thinking.

OLD WAY

- ✗ Learn syntax for years
- ✗ Pay a developer R5 000–15 000
- ✗ Wait 4–8 weeks
- ✗ Hope they understood you
- ✗ Repeat forever

THE VIBE WAY

- ✓ Describe what you need
- ✓ AI builds it instantly
- ✓ You test and tweak it
- ✓ Done in hours, not weeks
- ✓ You own it completely

You are the Director.

AI is your crew.

A film director doesn't operate the camera, edit the footage, or mix the sound.

They know what shot they want — and communicate it precisely.

That is exactly what vibe coding is.

You

The vision,
the idea, the goal

AI

The technical
execution

Your Customer

The audience
you're serving

You know the problem better than any developer ever will.

That is the most valuable ingredient in building great software.

You live the problem

You use your own tool every day. You'll notice instantly when something is wrong or missing.

You know your customer

You know what language they speak, what they fear, what they need. AI doesn't. You do.

You can iterate fast

No briefing meetings. No scope creep. No waiting. You change it yourself in minutes.

You keep 100%

No developer retainer. No maintenance fee. No dependency. You built it, you own it.

Three tools. One afternoon each.

No developer. No coding knowledge. Built by describing in plain English.

Customer Quote Builder

Plumber in Soweto

✓ Saves R800/mo on SaaS

Described: fill in client details, generate professional quote, WhatsApp button.

🕒 Built in 80 minutes

Staff Attendance Register

School principal, Limpopo

✓ Replaced paper register

Described: add staff names, mark attendance daily, show weekly summary.

🕒 Built in 55 minutes

Client Style Card App

Salon owner, Cape Town

✓ No more notebooks

Described: save client name, hair type, usual service, notes after each visit.

🕒 Built in 65 minutes

The Vibe Coding Loop

Four steps. Repeat until it's exactly what you want.

1

DESCRIBE

Write what you want in plain language.
Be specific about inputs and outputs.
No jargon required.

2

GENERATE

KasiCode AI writes the code.
Usually takes 10–30 seconds.
You don't read it yet.

3

TEST

Click Run. Use the app.
Does it do what you wanted?
Check on your phone too.

4

REFINE

Tell the AI what to change.
One thing at a time.
Repeat until perfect.

Three tools. All free. All in your browser.

No installs. No laptop needed. Works on your phone right now.

KasiCode AI

Your AI Builder

The brain that builds

Describe what you want. The AI writes the code. Runs right here in your browser.

Code Editor

Built into KasiCode

Where the code lives

You can see the code, edit it, or ignore it. Your choice. It updates live as you chat.

Live Preview

Instant results

Your real-time test

Every change appears immediately. What you see is exactly what your users will see.

Let's build.

Today's app:

Business Idea Validator

You type any business idea. The AI gives you a SWOT analysis and a go/no-go score.

Useful today. Yours forever. Built in under 90 minutes.

 **90 minutes**

 **Works on phone**

Business Idea Validator — how it works

You type your idea

"A mobile car wash service for Sandton offices"

AI analyses it

Strengths · Weaknesses · Opportunities ·
Threats

You get a verdict

Score out of 10 + specific recommendations

Why this app?

- ✓ You'll use your own real business idea as the test
- ✓ You'll immediately see the value of what you built
- ✓ It teaches every skill you need for all 5 days
- ✓ You can share it with anyone after today

Open KasiCode. Type this exactly.

Don't copy-paste. Type it yourself. Feel what it's like to give instructions to AI.

YOUR PROMPT

Build me a single-page web app called "Business Idea Validator".

The user types a business idea into a text box. When they click "Analyse My Idea", the app sends the idea to an AI and displays:

1. A SWOT analysis (Strengths, Weaknesses, Opportunities, Threats)
2. A score out of 10 with a go / no-go recommendation
3. Three specific action steps

Make it mobile-friendly with a clean, professional design. Use warm orange as the main colour.

After you hit send — what happens next?

The AI reads your instructions and writes all the code.

In about 20 seconds, you'll see a working app appear.

Code appeared. That's fine. You don't need to read it.

Click RUN

The big green button in the top bar. This is all you need to do right now. Your app will appear in the preview panel.

Check on your phone

Tap the preview and scroll. Does it look right on a small screen? This is your real test.

If something looks wrong

Don't fix the code. Tell the AI in plain language what you see. It will fix it for you.

Remember: the code is not your product. The working app is your product.

Now you iterate.

This is where vibe coding gets addictive. One message. Instant result.

Change the colours

"Change the colour scheme to dark navy and gold. Keep everything else exactly the same."

Mobile fix

"The layout looks cramped on my phone. Fix the spacing so everything breathes properly on a small screen."

Improve the output

"Make the SWOT analysis display as four separate coloured cards instead of plain text."

Add WhatsApp sharing

"Add a Share via WhatsApp button that sends the score and top 3 recommendations as a message."

Brand it

"Add my business name 'Zola Consulting' as a header at the top. Use a professional dark theme."

Visual score

"Show the score out of 10 as a large circular progress indicator instead of just a number."

Use your actual business idea.

Don't test with a fake idea. Put in something real. Something you've been sitting on.
This is the moment the tool earns its value.

YOUR TASK RIGHT NOW

1. Open your Idea Validator app
2. Type in a real business idea — something you've actually thought about
3. Hit Analyse and read the result
4. Ask the AI to improve one thing you don't like about the output

Need inspiration? Here are ideas from real cohort students:

💡 A WhatsApp ordering system for my spaza shop

💡 Online tutoring sessions for matric learners

💡 A meal prep delivery service for office workers

💡 Mobile hair and beauty services for events

💡 A recycling pickup service for townships

💡 An AI-powered CV writing tool for job seekers

Demo Time.

Everyone shows what they built.

90 seconds each

Show the app on your screen or phone

Tell us one thing

What does your app do? Who would use it?

One question only

What's the one thing you'd change next?

Celebrate each other

Loud applause is mandatory. Always.

What you proved today.

1

You can direct AI

You don't need to know how to code. You need to know how to describe. You proved that today.

2

You built a real app

It works. It runs. It's shareable. You made it from zero in under 90 minutes.

3

Iteration is your superpower

Every change you described became reality immediately. That loop is now yours forever.

4

The ceiling is gone

Everything you built on Days 2–5 uses this exact same method. You already know how.

One thing before Day 2.

Optional. But the students who do this always get more out of Day 2.

YOUR TASK

Write down 3 tools your business currently needs or pays for.

For each one: who uses it, what they put in, and what they get out.

Bring this list to Day 2. One of these becomes your Day 5 build.

Bonus (for the overachievers):

Add one feature to your Idea Validator

Try something new. Just describe it and see what happens.

Share your app link in the WhatsApp group

Your first public product. Celebrate it.

Show one person what you built today

Watch their reaction. That reaction is your motivation for tomorrow.

See you tomorrow.

Day 2 — Build Tools Your Customers Actually Use

Customer Quote Generator

Build a tool that generates professional quotes for your specific service. Share it via WhatsApp today.

The Input → Output Pattern

The mental model that unlocks every business tool you'll ever build. Simple, powerful, permanent.

Your First Customer-Facing Tool

By end of Day 2 you'll have something you can send to a real customer and charge for.
