

DAY 02

Build Tools Your Customers Actually Use.

Input → Process → Output

KASICODE

by Prestige Platform

Goal: Build a tool a real customer can use today

App: Customer Quote Generator

3 Hours · Day 2 of 5

WhatsApp sharing built in from the start

kasicode.app

Welcome back. Let's go further.

✓ Yesterday you proved it — you built a working AI app from zero. Today we go further.

0:00 – 0:30

The Core Pattern

Input → Process → Output — the anatomy of every business tool

← WE ARE HERE

0:30 – 1:45

Build It

Customer Quote Generator — shareable, professional, WhatsApp-ready

1:45 – 2:15

Make It Yours

Customise for your industry — prices, fields, branding

2:15 – 2:45

Your First Customer

Share it with a real person and watch them use it live

2:45 – 3:00

What's Next

Day 3 preview + tonight's task

Every business tool ever built follows one pattern.

Master this and you can build anything.

INPUT

- Customer name
- Service needed
- Special requirements
- Date / location

PROCESS

- AI reads the input
- Applies your rules
- Formats the result
- Makes it professional

OUTPUT

- Professional quote
- Formatted invoice
- Custom response
- WhatsApp-ready message

Specificity is the skill.

The more precisely you describe what you want, the better the result. Always.

✗ VAGUE PROMPT

```
"Make me a quote app"
```

Result: A generic form that doesn't match your business, your prices, your customers, or your brand. You'll spend time fixing it instead of using it.

✓ SPECIFIC PROMPT

```
"Build a quote generator for my  
plumbing business. Customer fills  
in: name, job type, address..."
```

Result: A tool tailored to your exact business. Correct fields, correct tone, correct output format. Ready to use with real customers the same day.

```
The formula: Build me a [tool type] for my [industry] business. Customer fills in: [fields].  
Output should show: [result]. Include: [any special feature].
```

A tool only has value when someone uses it.

Build with sharing in mind from Day 1. The share button matters more than the save button.

Share link

Every app we build gets a shareable URL. One tap and your customer is using your tool — no app download, no login.

Built into KasiCode

WhatsApp first

In SA, WhatsApp is the primary business channel. Every tool we build includes a 'Share via WhatsApp' button by default.

SA-native design

Customer-ready

Before you share, test it like a customer. Use your own name. Spot anything awkward. Fix it with one message to the AI.

Quality control

The money moment

When a customer uses your tool and gets a professional result, they experience your business as capable and trustworthy. That is marketing.

Brand value

Today's build:

Customer Quote Generator

A customer fills in their details and what they need.

Your tool generates a professional, branded quote instantly.

They can receive it via WhatsApp. You look like a pro.

90 min

to build

WhatsApp

share built-in

Any industry

customisable

**R400–
800/mo**

SaaS value

Customer Quote Generator — the flow

1

**Customer fills the form**

Name · contact number · what service they need · any special requirements · preferred date

2

**AI generates the quote**

Business name · reference number · itemised services · subtotal · VAT 15% · grand total · payment terms

3

**Professional result appears**

Formatted, branded, ready to send. Looks like it came from a large company — built in seconds.

4

**One tap to WhatsApp**

Customer receives the quote on WhatsApp immediately. No email. No PDF. No waiting. SA-native.

Open KasiCode. Type your version of this.

Customise the [brackets] with your actual business details before sending.

YOUR PROMPT — customise the [brackets]

Build me a quote generator for my [type of business — e.g. plumbing / catering / tutoring] business.

Customer fills in: their name, phone number, what service they need, any special requirements, and preferred date.

Generate a professional quote showing: my business name "[Your Business Name]", a quote reference number,
the service with a price, subtotal, VAT at 15%, and total amount.

Add a "Send via WhatsApp" button. Make it mobile-friendly with a clean professional design.

💡 Tip: Type out the prompt yourself — don't copy-paste. The act of typing forces you to think about your specific business.

Same base. Different business. Totally different tool.

Use these iteration prompts to customise for your exact industry.

Plumber / Electrician

"Add standard job types as a dropdown: "Burst pipe / Geyser replacement / Electrical fault / New installation". Pre-fill common prices for each."

Hair Salon

"Replace "service" with a multi-select of services: braids, relaxer, cut, colour, treatment. Add stylist name and a deposit amount field."

Caterer

"Add: number of guests, event type (wedding/corporate/birthday), menu choice from my packages. Calculate per-head cost automatically."

Tutor

"Change "quote" to "lesson plan". Add: subject, grade, number of sessions per week, duration. Show monthly fee = sessions $\times$ rate."

Builder / Contractor

"Add: site address, estimated duration, materials list with quantities, labour cost, travel cost. Show a detailed breakdown with 15% markup."

Transport / Delivery

"Add: pickup address, drop-off address, vehicle type, distance. Calculate cost = distance $\times$ rate per km. Add ETA field."

The WhatsApp moment.

This is when your tool becomes a business.

In South Africa, WhatsApp is the business channel.

Your customers don't want a PDF. They don't want an email.

They want a message. Right now. On the app they already have open.

Instant delivery

Customer gets the quote while they're still on the phone with you. Zero wait.

Easy to say yes

They can reply 'Yes, let's do it' directly. The quote becomes a conversation.

Natural follow-up

You can follow up in the same thread. No losing track of who you quoted.

You look different

90% of businesses in your sector still send quotes by hand or not at all. This sets you apart immediately.

75 minutes. Let's go.

PHASE 1

0–20 min

Get the base working

Paste your prompt into KasiCode

Hit send — watch it build

Click RUN to see the preview

Fill in a test quote with your name

PHASE 2

20–55 min

Customise for your industry

Change the fields for your business type

Add your business name and brand colour

Set your service types and prices

Adjust the output format to match what you'd actually send

PHASE 3

55–75 min

Test and polish

Test it on your phone — how does it look?

Fix anything that looks off

Generate a real WhatsApp message from it

Share the link in the group

Stuck? Use these.

Copy and paste any of these into KasiCode when you need it.

Add my branding

"Add my business name "[Name]" as a large header. Use [colour] as the primary colour throughout."

Fix mobile layout

"The form looks cramped on my phone. Fix the spacing so every field is easy to tap and all text is readable on a small screen."

Add bank details

"Add my banking details at the bottom of every quote: Bank: [Bank], Account: [Number], Branch: [Branch code]."

Fix VAT calculation

"The VAT calculation is wrong. VAT should be 15% of the subtotal, and the total = subtotal + VAT. Please fix this."

Add service options

"Replace the free-text service field with a dropdown showing these options: [list your services with prices]."

Improve the quote output

"Make the generated quote look more professional — use a clean layout with clear sections, not a wall of text."

Add a discount field

"Add an optional discount field. If a discount percentage is entered, show it as a line item and recalculate the total."

Add WhatsApp button

"Add a "Send via WhatsApp" button that pre-fills a message with the customer name, quote reference, and total amount."

What you just built is worth real money.

The tool you just built in 90 minutes would cost R5 000–15 000 to outsource to a developer.

The equivalent SaaS subscription would run R400–800 per month. You built it for free.

Send it to customers today

You have a working, professional quotation tool. Use it in your next customer conversation today.

Share it in your WhatsApp groups

Post your tool link in your business WhatsApp groups. Let people try it. Collect feedback.

Add it to your profile

Instagram bio, Facebook page, WhatsApp status — link your tool. It shows what you're capable of.

Charge for it

Other businesses in your sector need this too. You can build and sell the same tool to 5 businesses at R500/month each.

Demo Time.

Show your quote generator. Use a real customer scenario.

Fill in a quote live

Use a real customer name and a real job. Show us the actual output.

Show us on your phone

How does it look on mobile? That's how most customers will see it.

Tap the WhatsApp button

Show the pre-filled message that gets sent. Does it look professional?

Tell us one thing you'd change

What would make it even better for your specific customers?

Other tools you could build today.

Same method. Different description. Completely different tool.

Job Application Screener

Paste a CV, get a hiring score and key questions to ask in the interview.

WhatsApp Auto-Reply Writer

Enter the customer's message, get a professional WhatsApp reply in your tone.

Product Description Generator

Enter product name and features, get a compelling sales description.

Meeting Summary Tool

Paste meeting notes, get a formatted summary with action items and owners.

Complaint Response Generator

Enter the complaint, get a calm, professional response that retains the customer.

Social Media Caption Writer

Describe your product or service, get 5 captions ready to post on Instagram.

Business Report Summariser

Paste a long report, get a one-page executive summary with key numbers.

Staff Training Quiz

Enter a topic and it generates a 10-question quiz with answers — preview of Day 4.

Two days in. Look how far you've come.

Input → Process → Output

The pattern that unlocks every business tool you'll ever want to build.

Specificity wins

The more precisely you describe your need, the better the AI delivers.

A real, usable tool

Your quote generator works. It's shareable. You can use it with real customers today.

WhatsApp = distribution

You now know how to build tools that reach customers where they already are.

Industry customisation

The same prompt framework adapts to any business — plumber, caterer, tutor, salon.

The value equation

What took you 90 minutes would cost R5 000+ to outsource. That gap is your opportunity.

One real test before Day 3.

The students who do this always come back with the best stories.

YOUR TASK

Send your quote generator link to one real person — a customer, a friend in business, or a family member.

Ask them to fill it in as if they're a real customer. Watch what they do. Note what confuses them.

Bring that feedback to Day 3 and we'll fix it together.

Bonus challenges:

Share your tool link in the WhatsApp group

First test: does anyone click? Does it work on their phone?

Add one thing you wish it had

A field you forgot, a different colour, a new output format. One more iteration.

Screenshot the best quote it generates

Post it in the group. Show us what it looks like when it works perfectly.

See you tomorrow.

Day 3 — Tools That Remember

Add memory and data to your apps so they run your business every day.

Apps That Remember

Your customer tracker saves every entry. Still there when you come back tomorrow. Works offline.

AI Reads Your Data

Ask the AI questions about your own data — "which customer hasn't ordered in 30 days?"

WhatsApp Export

One tap to send a customer list or summary as a WhatsApp message to yourself or your team.
