

DAY 05

Ship Your Own Idea.

This is what you came for.

KASICODE

by Prestige Platform

Build the tool your business actually needs

Deploy live — a real URL, today

Demo day — show the world what you made

Graduation, certificate, and what comes next

kasicode.app

Five days. You've earned today.

✓ D1 Idea Validator

✓ D2 Quote Generator

✓ D3 Data Tracker

✓ D4 Quiz + Leads

0:00 – 0:45

The 1-Page Spec

Turn your idea into a prompt — guided group exercise

[← WE ARE HERE](#)

0:45 – 2:15

Build Sprint

90 minutes of focused building. Facilitator unblocks every student.

2:15 – 2:35

Deploy Live

Netlify Drop — your app gets a live URL in under 5 minutes

2:35 – 3:00

Demo Day

Every student shows their app. 90 seconds. Loud applause required.

3:00 – 3:30

Graduation

Certificate, affiliate invite, KasiCode subscription offer, what's next

Today you build the tool you've always needed.

Not a tutorial app. Not an example.

Yours. For your business. Solving your real problem.

You already know how

You've built 4 apps this week using the same method. Day 5 is the same loop — describe, generate, test, refine.

Your spec is your prompt

The 10 questions from last night become your starting prompt. The more complete your spec, the better your first build.

Done beats perfect

A working app you deploy today is worth more than a perfect app you're still planning next month. Ship it.

Fill this in. It becomes your first prompt.

10 minutes. Write it in your notebook or on your phone. Be specific — vague specs produce vague apps.

1

What is it called?

Give your app a clear name

2

Who uses it?

You only / your staff / your customers / anyone

3

What do they put in?

List every field — name, date, amount, product, etc.

4

What do they get back?

The output — quote, score, summary, list, alert

5

Does it save data?

Yes or No. If yes: does it need to work on multiple devices?

6

Who else sees it?

Just me / staff / customers / public via link

7

Works offline?

Yes (localStorage) or No (can use cloud)

8

How should it look?

Professional dark / warm and friendly / clean minimal

9

One thing it MUST do

The core function — everything else is secondary

10

What makes it shareable?

What would make someone send this link to a friend?

Your spec is your prompt. Here's the formula.

Take your 10 answers and build them into this structure. Then paste it into KasiCode.

THE MASTER PROMPT TEMPLATE

Build me a [YOUR APP NAME] for my [YOUR BUSINESS TYPE] business.

[Who uses it] will fill in: [LIST YOUR INPUT FIELDS].

The app should [DESCRIBE THE OUTPUT — quote / score / list / summary / alert].

[MEMORY: Save all data automatically so it persists between sessions. / OR: No data saving needed.]

[SHARING: Add a "Share via WhatsApp" button. / OR: Add a shareable link.]

Make it mobile-friendly with a [YOUR STYLE] design. Use [YOUR COLOUR] as the main colour.

Example (Salon Owner):

"Build me a Client Style Book for my hair salon. Stylists fill in: client name, hair type, last service, colour formula, and next appointment. Save all data automatically. Mobile-friendly, warm and friendly design, dusty rose as the main colour."

90 minutes. Build the real thing.

PHASE 1

0–15 min

First build

Paste your prompt into KasiCode

Run it — see what comes back

Test every input and output

Note what's missing or wrong

PHASE 2

15–55 min

Iterate to excellent

Fix the 3 most important things first

Customise colours, name, fields

Add any missing features one at a time

Test on your actual phone

PHASE 3

55–70 min

Polish + prepare demo

Make it look professional

Add real data — at least 5 entries

Prepare your 90-second demo script

Think: what one thing will impress people?

Stuck? These prompts rescue any build.

Copy and paste any of these directly into KasiCode — no modification needed.

Nothing works at all

"The app is completely broken. Start fresh. Re-read my original request and rebuild it from scratch, keeping the same design and logic."

Data disappears on refresh

"All my data disappears when I refresh the page. Implement localStorage so every entry is saved automatically and persists indefinitely."

Missing a feature I need

"Add this feature to the existing app without changing anything else: [describe the single feature you need]."

Make it look more professional

"This looks like a prototype. Make it look like a polished, production-ready app — proper spacing, consistent fonts, smooth transitions, and a loading state."

It looks terrible

"The design is very poor. Completely redesign the visual style — modern, professional, mobile-first. Keep all the logic and data exactly as is."

Broken on mobile

"Everything is broken on my phone. Rebuild the entire layout to be mobile-first — full-width buttons, no horizontal scrolling, large tap targets, readable text."

I want to start over

"Forget the current code. I want to rebuild my app with these new requirements: [paste your updated spec]. Make it better than the first version."

WhatsApp button not working

"The WhatsApp share button is not opening WhatsApp. Fix it so it uses the wa.me format: `https://wa.me/?text=[encoded message]`. Test the format on mobile."

Deploy in 5 minutes.

Your app goes from your screen to the internet right now.

1

Copy your code

In KasiCode, click the Code tab. Select all the code (Ctrl+A or Cmd+A). Copy it.

2

Open Netlify Drop

Go to drop.netlify.com. You'll see a big drag-and-drop area. This is your deployment zone.

3

Create your HTML file

Open Notepad or any text editor. Paste your code. Save it as "index.html" on your desktop.

4

Drag and deploy

Drag the index.html file onto the Netlify Drop area. Watch the upload bar. Done in seconds.

5

Copy your live URL

Netlify gives you a link like `random-name.netlify.app` — that's your live app. Share it anywhere.

Demo Day.

You built something real. Now show it.

90 seconds

That's your slot. Use every second. Practise once before you present.

Show it live

Use your actual phone or screen. Open the real app. Fill in real data live.

Say one sentence

'This is [app name]. It helps [who] do [what].' Short and clear wins.

Celebrate loudly

Clap after every single demo. Every single one. Non-negotiable.

90 seconds. Here's exactly what to say.

Follow this structure. Fill in the [brackets] with your specifics.

0:00–0:15

THE HOOK

"This is [app name]. I built it because [one sentence problem you had]."

💡 Be personal. The more specific, the better.

0:15–0:50

THE DEMO

"Watch — I'll fill in [input fields] and click [button]. Here's what comes back: [show output]."

💡 Do it live. Don't describe it — show it.

0:50–1:10

THE VALUE

"Before this, I used to [describe the old painful way]. This saves me [time / money / embarrassment]."

💡 Real numbers are powerful. 'Saves 2 hours a week' beats 'really useful'.

1:10–1:30

THE CLOSE

"The link is in the group. Try it. And honestly — if I can build this in 4 days, anyone can."

💡 End with the share. Seed the group with curiosity.

Five days. A lifetime of capability.

DAY 1	Business Idea Validator once-off	R2 000–5 000
DAY 2	Customer Quote Generator SaaS replacement	R400–800/mo
DAY 3	Customer & Stock Tracker CRM / inventory	R300–600/mo
DAY 4	AI Quiz Generator + Lead Capture Digital product	R500–2 000/mo
DAY 5	[YOUR OWN APP] Exactly what your business needs	Priceless

You paid R500–1 000 for this week.

The tools you built would have cost

R8 000–22 000 to outsource —

and you would have waited 8 weeks.

You built them in 5 days.

And you can keep going.

Read this out loud. Slowly.

Let it land for the group.

What you take with you.

5 Deployed Apps

Live URLs. Real tools. Portfolio-ready. You can share these links with employers, customers, or investors right now.

The Prompt Playbook

50+ business prompts organised by task. Your reference guide for every app you'll ever want to build.

Your Certificate

Issued today. Lists every app you built and the skills you demonstrated. Share it on LinkedIn.

The Builder Community

This WhatsApp group stays active. Future cohort students, collaboration opportunities, and peer support.

KasiCode Access

The playground you used all week. Your 30 cohort builds are done — subscribe to keep building at R99/month.

The Affiliate Opportunity

Every person you refer to the next cohort earns you R150–300. You know the value. Share it.

You know the value. Help others find it.

Every cohort graduate becomes a potential affiliate on Prestige Platform — earning real commissions.

1

Get your affiliate link

Sign up at kasicode.app/affiliate. Takes 3 minutes. You get a unique tracking link.

2

Share with your network

Send the cohort link to anyone who has a business idea or wants to learn vibe coding. WhatsApp, Instagram, word of mouth.

3

Earn on every signup

R150 for Standard (R500 cohort). R200 for Premium (R750). R225 for Self-Paced (R999). P

R150 · R200 · R225
per referral by plan

4

Track your earnings

Your Prestige Platform dashboard shows clicks, signups, and payouts in real time. Withdraw any time.

Your cohort builds are done. Keep going.

KasiCode is your playground. African-priced. Always-improving. Yours to keep.

COHORT GRADUATE PRICE

Monthly

R99 /mo

Unlimited builds, saves, shares, and AI access. Cancel anytime.

- ✓ Unlimited AI builds
- ✓ Save projects to cloud
- ✓ Share via link
- ✓ Mobile-first playground
- ✓ Community access

Annual

R699 /yr

Everything in Monthly. Save 40% — best value for serious builders.

- ✓ Everything in Monthly
- ✓ Priority AI speed
- ✓ Early access to new features
- ✓ Advanced prompt library
- ✓ Affiliate programme access

This is not the end. It's the start.

Most people finish a course and forget it. Here's how to make this week count.

THIS WEEK

- Use at least one of your 5 apps in your actual business
- Share your quiz or quote tool with 5 real people
- Post your Day 5 app link to your WhatsApp status
- Sign up for the affiliate programme

THIS MONTH

- Build one more tool using the Prompt Playbook
- Identify one business in your sector that needs your Day 4 quiz tool
- Set up a Yoco payment link on your best tool
- Refer one person to the next cohort — earn your first commission

THIS YEAR

- Build and launch a tool for your community at R99–299/month
- Sell a custom tool build to one business for R2 000+
- Run your own 'teach what you know' cohort — we'll support you
- Become a full KasiCode affiliate — build recurring income

Before you leave — record your story.

Your experience this week is someone else's inspiration. Help them find it.

Record a 30-second video

Show your Day 5 app on your phone. Say: "I built this in 5 days with no coding experience. Here's what it does." That's it. Post it in the group.

One sentence feedback

Tell us: 'The most surprising thing I built this week was ____.' That sentence becomes our marketing. It also helps us make the next cohort better.

Screenshot your best app

Post your favourite build to the WhatsApp group with the link. The caption: 'Built this in [X hours] at KasiCode. Try it: [link]'

Tag us when you post

Share your app on Instagram, Facebook, or LinkedIn. Tag @prestigeplatform. We'll reshare every single one. Your app gets an audience.

You are a builder now.

That doesn't go away when you close this tab.

That's yours. For ever.

KasiCode Playground

kasicode.app

Keep building. R99/month.

Affiliate Programme

kasicode.app/affiliate

Earn R150–225 per referral.

Next Cohort

kasicode.app

Share with someone who needs this.

Thank you for showing up every day. Now go build something.
